

EDISON Digital Multimeter

DM383

Features include continuity, transistor hFE, reading/peak hold, fused current range, auto power off, overload indication, low battery indication, tilt stand/hanger.

Voltage max: 600V AC, 600V DC.

Current max: 10A DC.

Resistance max: 2MΩ.

Safety rating: Cat II.

Warranty: 1 year.

Supplied with holster.

Model Number	Order Code	Price/1 RND

Non-Contact AC Voltage Detector

Non-contact voltage detector without the need to disconnect the conductor/ appliance. Flashing light and audible indication of AC voltages of 100 to 240V. Quick and accurate detection of cable breaks, blown fuses and distinguish between live, neutral wires in single and three phase supplies.

Voltage sensitivity:

100 to 240V AC.

Frequency: 50/60Hz.

Over voltage category:

Cat III 600V.

Detection distance: <5mm.

Operating temperature:

32 to 122°F (0 to 50°C).

Storage temperature:

-4 to 140°F (-20 to 60°C).

Humidity: <85%RH.

Power: batteries x2, 1.5V (AAA).

EDISON

Auto Range 1000A AC/DC Digital Clamp Meters

Edison™ multimeters are an essential and versatile piece of test equipment. They are used by qualified electricians and mechanics alike to perform various essential tests and measurements on delicate electronic systems, automotive devices, mains appliances, and installations. By operating the multi position switch you can quickly and easily set them to be a voltmeter, an ammeter or an ohmmeter. Within the Edison™ range of multimeters you will find direct reading multimeters and non-contact reading multimeters.

DCM070

Ideal for electrical troubleshooting and testing in commercial environments. The AC/DC digital multimeter is capable of testing for the following: telephone networks, fuse connections.

AC voltage: 750V.

DC voltage: 1000V.

AC/DC current: 1000A.

Resistance: 60MΩ.

Frequency: 100kHz.

Frequency from clamp: 400Hz.

Diode testing facility, continuity buzzer, clear display with LED backlight and data hold function, auto power 'OFF' and low power indicator, auto range facility, four segments bar graph.

Digital display count: 3999.

Conforms to **IEC 1010, CAT II 1000V** and **CAT III 600V**.

Pack includes: digital clamp multimeter, test probes, 3x DC1.5V AAA batteries (installed), instruction manual, protective case with carry handle,

Dimensions (W x D x H):

EDISON Infrared Digital Thermometer with Laser Targeting

IRT537

A high resolution infrared laser thermometer suitable for a wide range of industrial applications, HVAC and automotive diagnostics. The laser targeting enables accurate readings by guiding the user to the optimum measuring distance, please see user manual for operating instructions. Ideally suited for work in confined spaces and where accuracy is required such as on bearings, circuit boards, air-con units or in engine compartments. Simply aim at the target object, pull the trigger mechanism and read the current surface temperature from the LCD display. If necessary the laser can be activated via the laser button for more accurate targeting. Temperature is displayed on back-lit LCD display and features hold function for ease of use.

Measurement range: -20°C to 537°C.

Accuracy: -20°C to 50°C

±2.5°C 51°C to 537°C

±(reading x 1% 1°C).

Relative Humidity & Temperature Tester

THM150

This multimeter is ideal for temperature, humidity and dew point testing in residential and commercial environments such as offices, storerooms, greenhouses and places where a controlled environment is essential.

Conforms with **EN61326-6: 2006 and EN61326-2-2: 2006.**

Meter capabilities:

- Testing temperature: -10 ~ 50°C (14 to 122°F).
- Testing humidity: 0 ~ 100%RH.
- 4 digit clear LCD display with optional back light.
- Data hold function.
- Auto power 'OFF' and low power indicator.
- Battery operated - DC1.5V 3x AAA (included).

Airflow, Velocity & Temperature Tester

TVA150

This meter is for measuring airflow and temperature. It is ideally used to measure the air speed at ventilation outlets and to test temperatures in residential and commercial environments such as offices, storerooms, greenhouses and places where climate conditions can be analysed.

Conforms with **EN61326-6: 2006 and EN61326-2-2: 2006.**

Meter capabilities:

- Measuring wind/airflow in: m/s, km/h, fpm, mph, kts.
- Beaufort scale.
- Temperature in both °C and °F.

Testing ranges: 0.4 ~ 20m/s, 80 ~ 4000fpm, -10 ~ 50°C (14 ~ 122°F).

- 4 digit clear LCD display with optional back light.

QUALITY THROUGH PRECISION

Edge & Centre Finders

Cylinder Type

For fast accurate work location. Made from tool steel and hardened all over, they can be used on flat surfaces, straight edges, shoulders, grooves, studs, dowels, centre points and scribed lines.

To locate an edge first secure the finder in a collet or chuck, the work table is then traversed to cause the rotating edge finder to make contact with the workpiece. (**fig 1**).

Upon touching the workpiece the edge finder's contact point will be forced into running concentrically with the body (**fig 2**). Any further movement to 'off-centre' will cause a distinct wobble.

At this point, the distance from the work edge to the centre of the finder is equal to half the diameter of the contact point. Datum lines and centre points are located using the combination edge and centre finder (**fig 3**).

This has a cone shaped contact point which is lowered into position barely touching the workpiece at the point you wish to measure. The finder is made to run concentrically using a steel rule or straight edge (**fig 4**).

Position the contact arm in line, but slightly away from the surface to be aligned. When finding the surface of a diameter, the 'Disc' must be positioned as near to the centre of that diameter as possible. Run the spindle between 200 and 500 revs/min. The table or spindle is then moved slowly, to bring the contact arm closer to the surface to be aligned. The contact arm will tap lightly against the surface (**fig 2**) the movement of the arm will become less and less the nearer the datum point gets to the spindle centre line (**fig 3**). When the arm stops spinning in a straight line and starts to 'jump', this indicates the datum point (**fig 4**):

$$\frac{1}{2} \text{ contact dia} + \text{Edge} = \text{Centre} \quad \frac{1}{2} \text{ contact dia} - \text{Centre} = \text{Edge}$$

Edge & Centre Finder - 5 Piece Set

Consists of a chuck body and four contact arms. Designed to check 'run-out' or concentricity, straightness and alignment. Will indicate the position of a datum point on a component or fixture from the centre line of a machine spindle. Suitable for use on drill presses, lathes, milling machines, borers etc.

Chuck Body:

Held in the spindle using a suitable drill chuck or collet chuck (**fig 1**). The contact arms are retained in position using the knurled collar which lightly clamps the ball joint inside the body. Arms may be exchanged without the need to remove the body from the machine spindle.

Universal Indicator Holder

The detachable end will allow clamping with 2 and 3 piece dovetail clamping assemblies and when removed will fit standard 1/4" side clamp. This uses the spindle centre line to align component bores or spigots, check the flatness or squareness of workpieces or fixturing and check run-out of components. The spindle should only be rotated manually to avoid damaging the dial test indicator (**fig 1**).

Needle Point

To lightly mark out lines and positions on a component as a guide to subsequent operations, using the machine's dials or digital read-out to position the scribe point (not illustrated).

Anvil & Bypass Loppers

All with powder PVC coated, round tubular steel handles and foam rubber grips.

Heavy Duty Anvil Action

For cutting old, hard and dead wood. The anvil supports a wide area of the branch while the sharp narrow upper blade is forced through the wood with only a minimum amount of slicing action. Cuts with minimum effort. Compound jaw action.

Max. cutting diameter: 60mm.
Overall length: 730mm.

Bypass Action

The cutting blade passes a counterblade in a scissor bypass action. The pivot point is slightly offset from the centre line of cutting, creating a slicing action, which greatly reduces the effort required when pruning live wood.

For accurate pruning and clean cuts. Compound jaw action.

Max. cutting diameter: 60mm.
Overall length: 760mm.

Heavy Duty Bypass

The cutting blade of the lopper passes a counterblade in a scissor bypass action. The pivot point is slightly offset from the centre line of cutting, creating a slicing action, which greatly reduces the effort

Max. cutting diameter: 50mm.
Overall length: 760mm.

KENNEDY PROFESSIONAL Nylon Faced Safe Blow Hammers

Hard nylon faced hammer with 2 screw-on all purpose striking faces which can easily be replaced manually without the use of any other tools - minimising downtime.

Hollow chrome plated zinc head partially filled with steel pellets which impact a split second after the hammer face, reducing rebound, fitted with a fully moulded polypropylene shaft with soft feel dual material grip. There are no metal parts in the striking faces which could mar the workpiece as the head wears down.

The striking faces are reinforced for extra strength and to prevent fracture from 'off-target' hits.

Precision grooves in the metal head prevent faces from vibrating loose during use.

THOR HAMMER *Soft Faced
Hammers*

NEW

A safer alternative for striking machined surfaces than conventional steel hammers. The impact resistant striking faces shape themselves to the component being struck, minimising rebound damage to the component and reducing noise pollution in the workplace. The striking faces can be easily replaced once they have become worn. Available as standard, with a choice of five interchangeable face types.

Rawhide Faced Hammers

Head manufactured from malleable iron fitted with two rawhide striking faces and solid wooden handle. Rawhide manufactured from genuine water buffalo hide, tightly coiled and pressed three times under powerful hydraulic presses to ensure uniform quality and maximum durability.

Safety Wooden File Handles

A split file handle can cause a serious industrial accident. Kennedy safety handles are rapidly becoming standard equipment in workshops. Firmly secured inside each handle and covered by a ferrule is a steel spring, this combination absorbs the pressure when the tang of the file is driven into the handle, prevent splitting or cracking. Once properly inserted the tang of the file is held in a vice like grip that under normal use is virtually impossible to remove, unless the handle is deliberately broken.
